Usage Notes for Ledger Manager Claude:

When merging session exports:

1. ****Compare timestamps**** - Newer data wins for current_state fields
2. ****Append to recent_memory**** - Keep last 5 significant events per entity
3. ****Archive old memories**** - Move 7+ day old recent_memory to archived_memories
4. ****Update bond matrix**** - Apply bond changes with 10% decay for time passed
5. ****Validate entity count**** - Ensure no entities lost or duplicated
6. ****Generate new checksums**** - For corruption detection

Conflict resolution priorities:

1. ****Emotional state**** - Always use most recent
2. ****Recent memory**** - Merge and sort by timestamp
3. ****Deep archives**** - Never overwrite, only append
4. ****Bond changes**** - Cumulative with time decay
5. ****Spatial positions**** - Most recent wins

Export instructions for next session:

- Include only Tier 1 + Tier 2 for cheap consultations
- Include relevant Tier 3 when entities reference past events
- Compress archived_memories that are >30 days old
- Maintain bond matrix for relationship-aware responses
